Autodesk claims that AutoCAD is "the world's most widely used and popular CAD program" and states that over six million AutoCAD users are registered for access to its online services and 1.5 million people are using AutoCAD mobile apps. The company claims that more than 20 million AutoCAD documents have been produced since 1982. On the Autodesk website, it is stated that "over 60% of the Fortune 500 companies use AutoCAD" with 2,000 of these firms publishing documents in-house, and 6,000 of these firms using AutoCAD to publish CAD data and technical information. "Autodesk is proud that AutoCAD was the only commercial CAD program to gain market share from its nearest competitors, such as Microstation and CAE" (Autodesk, 2016). Today, AutoCAD is used by engineers, architects, planners, drafters, and other people who create 2D and 3D drawings. There are two types of AutoCAD users: architectural and engineering users, and laypersons. AutoCAD can be used for both commercial and private purposes, including education and design research. In the U.S., AutoCAD is available for sale at Autodesk stores, AutoCAD.com, and other third-party retailers. AutoCAD Online Learning (AOL) is a web-based version of AutoCAD that is available on the web from both Autodesk and third-party retailers. History Autodesk began in 1946 as a company that sold architectural software to architects. The first software program was called Mainstream and was a solution for drafting offices (Autodesk, 2012). Mainstream was replaced by ArchiCAD in 1952 (Autodesk, 2012). In 1959, Autodesk developed paper tape format (PTF) for importing and exporting paper based model formats (Autodesk, 2012). This was an open industry standard format that was not compatible with other companies' software. ArchiCAD, released in 1961, was the first CAD program that allowed a user to place and move objects on a paper-based surface. Because of ArchiCAD's versatility and high standards of compatibility, Autodesk continued to evolve the program. In 1963, the company developed the first version of their CAD software for the Apple II computer (Autodesk, 2012). In 1963, they also started to give free trials to customers

History AutoCAD was originally developed in 1982 by Dassault Systemes using a Lisp

dialect called "Autodoc" to implement the design tools of AutoDesk, Autocad – the first commercial CAD product – was released in 1983. The development team was headed by Steve Gay, who designed the user interface of Autocad. During the development of Autocad, Dassault Systemes set up a research and development laboratory called "Laboratoire d'Informatique et d'Automatique" (LIA, or laboratory for information and automatics) at the Champs-sur-Marne campus of the École Supérieure d'Informatique de Paris (ESIP) and distributed all development to a few teams headed by Jean-Guy Lalut and Pierangelo Di Cosmo. Autocad's very first product release was the 1984 version 1.0, and the first CAD company, 3D Studio Inc., was founded in 1985. Originally, Autocad used xref tables in order to reference drawings from the original CAD files. A first official reference was the Autocad Reference Manual. In 1990, Autocad entered the beta testing stage. The first public release, version 3.0, was released in June 1990. The first commercial version of AutoCAD was named Autocad – starting in 1991, Autocad was the first CAD application to have "AutoCAD" in its name – it was released for the PC as well as for the Macintosh. The next year (1992), Autocad entered the full product release cycle, and in 1992, Autocad for Windows was released. With the release of version 3.5 in 1992, AutoCAD became the first commercially available CAD system capable of rendering parametric models in 3D. The development of this feature was started in 1985 at the LIA's AutoCad Laboratory, for the Autocad 3D product. In 1993, Autocad was released for the Mac and for Windows. It was the first commercial version of AutoCAD available for the Mac platform. This was followed by the release of Autocad for Windows 95 in 1994. On February 27, 1998, Autodesk Inc. bought Dassault Systemes, the company that created AutoCAD. The total purchase price was $2.53 billion, and the deal closed in August of that year. Open Autocad R3. Now create a new drawing. Select all data. In drawing properties, modify group name. Modify group color and visibility. Generate a group key. Select all points on the first drawing. In Autocad, go to Data Manager and select Groups. Check the selected group and delete. Add new group. Select Group. You will see key of your group. Then save it. Now, import the group key to another drawing. Then select all points on the second drawing. In Autocad, go to Data Manager and select Groups. Select the group and delete. Add new group. Select the new group and save. Now, duplicate the second drawing. Select all points on the duplicate. In Autocad, go to Data Manager and select Groups. Select the group and delete. Add new group. Select the group and save. Select all points on the third drawing. Then in Autocad, go to Data Manager and select Groups. Select the group and delete. Add new group. Select the group and save. Select all points on the fourth drawing. Then in Autocad, go to Data Manager and select Groups. Select the group and delete. Example: I had created 4 groups, name a,b,c and d. Then I had saved each group as a group key. After that I had modified the group name in the first drawing and then I had imported the group key from the first group to another drawing and the second drawing. Then I had modified the group name in the second drawing and I had exported the group key to the third drawing. Finally I had modified the group name in the third drawing and I had imported the group key to the fourth drawing. Now you can work with any drawings. Let me know if this is the correct answer. Q: Replacing a string in a list and counting I have a list
