AutoCAD was developed for a specific class of users, namely architects, engineers, draftsmen and other designers. Since that time, the software has become one of the most popular commercial CAD programs in use today, used by millions of people around the world. The first AutoCAD program available for sale was a demonstration version, called AutoCAD Movie Studio. It came with two 2.5-inch floppy disks and a manual. The first version of AutoCAD (called AutoCAD 1.0) was also not very reliable, and so it was revised into the first AutoCAD 2.0. It was improved with the introduction of a Windows 3.1 interface and in 1993 became the first version of AutoCAD to be named as a product for general purchase. A major redesign of AutoCAD took place in 1996, introducing a fully integrated 2D and 3D modeler, and AutoCAD R2 in 1999. This version replaced the previous level numbers with Roman numerals. In 2002, AutoCAD LT was released, offering users limited functionality for free. AutoCAD 2010 was released in 2010, featuring a streamlined interface and improved usability. In 2011, AutoCAD 2013 was released, offering improved features and performance. AutoCAD has won numerous awards over the years, and it has been adopted for use by many of the world's largest engineering and architectural firms, such as AECOM and HOK. It is also used at schools of architecture, art colleges, and other schools of design around the world. AutoCAD Screenshots What is the difference between AutoCAD 2017 and 2016? Next, you should install Autodesk Autocad Formwork, so make sure you have it and have it activated. Then, when you're in the Create new drawing/layer (menu at the bottom of the main screen) press Alt + N. Select the preset option that says "Dimension". Enter the random letter that you just made and press ok. Then click on the dimension line/bar and choose a colour. It should be pretty simple, I hope this helps. The U.S. military said it will start evaluating candidates this month for a "surge" of thousands of troops to its Europe command. The announcement was made in a Pentagon news release Sunday by acting Defense Secretary Patrick Shanahan, who said the forces would be placed at a "pre-deployment training" status for about two years, then begin deploying to Europe in an "operational capacity." The announcement was the first indication that the administration of President Donald Trump will not bring home all 2,000 U.S. troops in Europe, which is the number remaining from the Obama administration. In announcing the forces, Shanahan cited the "growing threat in the region" and "improved readiness." "These forces will support U.S. and NATO European allies and partners," he said. "They will not be a first-use ground-combat capability, but they will help allies deter against a range of threats." NATO officials did not immediately comment, but U.S. officials say they have been expecting an additional brigade, or roughly 4,000 troops, for some time. They say the additional forces will be integrated into a "principled" force to deter "imminent threats" to Europe. The U.S. has said Russia's incursion into Ukraine and Crimea, the continued presence of Russian forces in eastern Ukraine and in Syria, and the Islamic State's resurgence and continued plotting in Europe are all reasons for the additional forces. The administration has been reviewing force-levels in Europe since the end of the Cold War. Last summer, Trump announced a shift from a promise to withdraw U.S. forces from Europe
