In 2013, 7.2 million people used AutoCAD, representing nearly a third of the industry.[1] In 2016, Autodesk added 15 million users in 20 new countries, bringing the total number of AutoCAD users to more than 32 million. AutoCAD 2019 received a major update on August 29, 2018, offering a variety of usability and quality of life improvements.[2] The current major release of AutoCAD is AutoCAD 2020. The new version features a totally rewritten rendering engine, a new vector editing feature, new technology for data exchange, a new AutoCAD brand, and several new applications and services. Software architecture AutoCAD is a desktop CAD software product marketed by Autodesk. The application is available for a variety of platforms, including personal computers (PCs), laptops, tablets, and mobile devices, and is generally available in English. AutoCAD is also available on the web and in the cloud, and on mobile devices with the free AutoCAD Mobile and AutoCAD Architecture. AutoCAD is a product of Autodesk; it can be used to generate drawings, graphics, and photographs of anything from 2D to 3D using a variety of software tools. In many cases, AutoCAD can also function as a 2D drafting tool. Though the user interface of AutoCAD is typically 2D, it supports all aspects of 2D and 3D design including block, topology, and reality modeling. There are three main categories of AutoCAD functions: • Drafting: design, dimension, and annotation. • Raster image processing (RIP): raster graphics editing. • Design recording: plotting, animation, and previewing. AutoCAD is a licensed product, which means that in most cases users must purchase a license for each computer they wish to use the program on, or pay a monthly subscription fee.[3] The license does not carry with it the "right to use" in other regions or countries, and the license holder may not sublicense the product without Autodesk's approval. In addition, third-party imports and exports of data are prohibited. An exception to this is professional users who have an "Authorized Dealer" contract with Autodesk.[4] AutoCAD is available in several editions, which are each compatible with either AutoCAD LT or AutoCAD 2018. Ronaldo missed Real Madrid's latest 2-1 win at Rayo Vallecano on Sunday, with reports in Spain suggesting that the Serie A giants have offered the 30-year-old a contract extension. But the news of an extended offer was strongly denied by the player's agent, Jorge Mendes, who also claimed he is unaware of any contract discussions. But Real Madrid's new manager, Zinedine Zidane, knows all about Ronaldo and his future. Ronaldo has won four La Liga titles and two Champions League crowns during his time in Spain. And having kept his distance during the World Cup this summer, Zidane is anxious to restore some of his former glory. Madrid's current pay structure means that

Ronaldo would see his salary increase from around €22m a year to €30m. But the player – who is a vital member of the European champions' first team – could command a contract worth around €150m over the next three years. However, Real Madrid's proposed offer, revealed by AS, is far below Ronaldo's demands and United and PSG have been reported as also keen to sign the superstar. And having declined to renew his contract last summer, Ronaldo has yet to commit to the Madrid club until now. Ronaldo's agent Mendes is scheduled to meet with Madrid's directors on Monday to discuss the contract situation. But the player's agent could give him permission to move on to a new club in the summer. Ronaldo joined Real Madrid from Manchester United in a deal worth €112m in 2009. The move a1d647c40b

Q: Makefile dependencies and SORM I have a simple question about Makefiles dependencies. I have a project where I'm using the SORM. Here is an example of how it is used. SORM_HOME = /usr/local/sorm/ SORM_ARGS = -v -f makefile/sorm_sources.mak all: \$(SORM_HOME)/make-sorm.pl @\$@ \$(SORM_ARGS) I created a makefile for make-sorm.pl that makes a Makefile for the whole project (all the.cpp files and some.h files). But, the script isn't really a dependency of the makefile so I can't use \$(SORM_HOME)/make-sorm.pl directly. I have added a line in the makefile: include \$(SORM_HOME)/Makefile.sorm_sources But I guess it doesn't help. Is there a way to use Makefiles dependencies to the script (make-sorm.pl)? Thank you for your help. Regards, Vincent A: You have two options: use static linking to reduce the size of the libraries (this also helps in the case where a program loads a lot of libraries and you have few binaries) make a function of the script, you can call it from the makefile with -f, then create a makefile for it Make
