AutoCAD is a powerful piece of engineering software that serves as the foundation for many kinds of engineering and architectural workflows. The term AutoCAD comes from "Automatic Computer-Aided Design". The 'CAD' part of the name stands for Computer-Aided Design and stands for, at first, computer aided drafting. But in more recent years, the term AutoCAD has expanded to mean computer-aided design. It supports one or more AutoCAD LT 2013 applications (generally referred to as LT clients), which share the same drawing file. In addition to a graphically based user interface, it has a command line. The command line is the primary means for editing drawings. The drawing editor is integrated into the operating system, so an LT client can be used in place of AutoCAD LT. It also runs its own version of AutoCAD LT. Autodesk AutoCAD LT uses a shared database, which is automatically synchronized with the "master" or main AutoCAD drawing database. The synchronization can be manual or automatic. AutoCAD LT can run on a single computer, or run on a group of computers connected to a local area network (LAN), or a wide area network (WAN). In the latter two cases, the drawings on each computer are stored on a network file server, and the network file server (the server hosting the network) is connected to a main AutoCAD database, allowing synchronized updates. In the single-computer case, synchronization is with a computer on the LAN or on the WAN that stores the drawings. If the main database is on a remote computer, a virtual desktop sharing (VDI) service is required to send commands from the local client computer to the main database. When updates occur, the main database is synchronized with all other databases, to which updates are made via remote desktop. The LT system is an alternative to the traditional standalone CAD system in which a user loads a new drawing into the application, and edits the drawing, before saving the drawing. In the standalone system, the drawing is opened, and then the user saves the drawing, at which point the changes made by the user are stored in the drawing file. In the LT system, the changes made by the user are saved as soon as the user saves the drawing, so the file is not locked. In AutoCAD LT 2013, this update synchronization is automatic. If a user changes the drawing on a client computer, AutoCAD LT runs a client software upgrade (CSU) process to upgrade
