

Wireless Head Control Mouse Emulator is a mouse emulator designed for use by individuals with arthritis. This mouse emulator is wireless, reducing the chance for injury and simplifying set up. This wireless mouse emulator uses head movement to move a mouse. The emulator allows up to three mice to be used at one time, and settings can be made for left, middle or right clicking, and double-clicking. When the mouse is moved, a bell sound is heard and a vibration is felt. Neddy Mouse is a mouse emulator designed for use by people with upper limb disabilities. This software enables the user to click on a mouse pointer, and can be used by people with upper limb disabilities. The mouse can be shaped like a human hand. This system can be used to control the cursor in a personal computer or video game, or to control a computer using head movements. ClickSite is a mouse emulator designed for use by people with upper extremity disabilities. This software enables the user to click on a mouse pointer, and can be used by people with upper extremity disabilities. The mouse can be shaped like a human hand. This system can be used to control the cursor in a personal computer or video game, or to control a computer using head movements. PupilMouse Lite is a mouse emulator that works on most computers with a connected camera. This software is designed for use by individuals with paralysis, cerebral palsy, or upper limb amputation. This software has a 32-bit memory space and is loaded directly from a flashdrive. Just plug the drive in and go. The software provides a wide field-of-view, and can be operated with or without head movement. There are three lighting levels, and many features are customizable.
